# Ayanda Dlamini

ayanda.dlamini@mail.example | 063 555 0103 | Durban | github.example/ayandad

## PROFILE

Self-taught Python developer. I have spent 18 months building tools that automate boring work for small businesses, and I am ready for a first full-time developer job.

## PROJECTS

**Stock Alert Service (2026)**

- Python script and small Flask API that reads a supplier spreadsheet, stores it in PostgreSQL and emails a shop owner when items run low. Used daily by one real shop for 8 months.

**Invoice Reader (2025)**

- Extracts totals from PDF invoices into a CSV with Python and a regular-expression parser. Handles 6 invoice layouts. 20 unit tests. Open source with a clear README and 4 issues closed from other users.

**School Fees Tracker (2025)**

- Built for a local after-school club. SQLite database, a simple web page and a weekly report. Replaced a paper register.

## WORK EXPERIENCE

**Freelance, small automation jobs** 2025 to present

- Three paid jobs on a freelance platform, each reviewed 5 stars. Learned to ask clients what they need before building and to send short weekly updates.

## SKILLS

Python, Flask, PostgreSQL and SQLite, Git and GitHub (pull requests from my own projects and 2 contributions to others), pytest, Linux command line, basic Docker.

## LEARNING

Online courses in Python, SQL and web development, each followed by a project that I published. Matric 2022.
